

# Digital Health Equity Pledge

As organizations dedicated to improving the health of all individuals, we share the belief that digital health technologies have the potential to be powerful tools to identify and address health inequities. As such, we commit to the following principles to ensure these tools do not exacerbate existing biases:

## Accessibility

We support digital health technologies that are accessible to all, including those with disabilities, and that will promote technologies that are inclusive of all digital and health literacy levels and non-English languages.

## Diversity

We support digital health technologies that are developed to consider the diverse populations they serve. Technologies should be designed, implemented, and tested in a transparent way by and for all genders, sexual orientations, races, religions, and socio-economic levels.

## Respect

We recognize that certain populations have been harmed by misuse of personal health information. We will respect and honor the privacy needs and preferences of historically marginalized populations and communities together with all people.

## Public Policy

We will work to advance public policies that address systemic causes of health inequities and support health care providers in leveraging digital health technologies as tools to identify and help address health inequities experienced by their patients.

We further commit to the consideration of these principles in all stages in the creation of the evidence base for digital health technologies, ensuring that when widely disseminated, they have demonstrated value for all segments of the population.
