APIs and EHR Usability

- Build upon the strong foundations that have been implemented in many health systems through a unified EHR

- Allow rapid internal development of applications responsive to user needs

- Penn Medicine has utilized APIs and custom applications embedded within the EHR to accelerate healthcare delivery innovation
  - Telemedicine (during Covid)
  - Provider handoffs
  - Data visualization
  - Clinical trial enrollment
  - Increasing guideline-directed medical therapy
Problem: Care teams are burnt out from time and effort spent navigating EHRs

Solution: Applications implemented within EHRs to assist teams with more efficiently and effectively delivering clinical care

Results:

- Quick build and integration of applications with features and functionality matched to user needs
  - Homegrown telemedicine platform built in two weeks
  - Integration of external applications within 30 days
- High levels of user satisfaction and feedback, enabling rapid iteration
